DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Sonesh et al (US 6,046,762).
- 2. In regards to claims 1, 8, 15, 20, 22, and 23, Sonesh discloses a method and system for establishing a remote agent station (Fig. 1 and remote call agents 121 and Fig. 5 and remote agents 503)) from a call center (Fig. 1 and local call agents 120) and Fig. 5 and call centers 501 and 502), comprising steps of: establishing a data link between a computer platform at the remote agent station and a CTI processor connected to a telephony switch at the call center (col. 6 lines 34-37 and col. 9-10 lines 63-4); determining to switch a selected one of the incoming calls to an agent at the remote agent station; retrieving data associated with the selected incoming call from a database (database server 130) at the call center (Fig. 1, col. 6 lines 49-55, and col. 7 lines 17-21); forwarding the data associated with the selected incoming call to the computer platform at the remote agent station via the data link; placing a call from the

Art Unit: 2642

call center to a telephone at the remote agent station; and switching the selected incoming call to the remote agent station (Fig. 5 and col. 10 lines 5-32).

Page 3

- 3. In regards to claims 2 and 9, Sonesh discloses a method, wherein the CTI processor at the call center and the computer platform at the remote agent station each have a modem connected by a telephony line to a telephony network, and the data link is established by the computer platform dialing up the CTI processor through the telephony network (col. 6-7 lines 63-7, col. 8 lines 56-67, and col. 9-10 lines 63-17).
- 4. In regards to claims 3, 10, 16, and 24, Sonesh discloses the method and system, wherein the telephony network is a publicly-switched telephony network (Fig. 1 and PSTN 111).
- 5. In regards to claims 4, 11, and 25, Sonesh discloses the method, wherein the CTI processor at the call center is adapted as an Internet server, and the data link is established by the computer platform at the remote agent station dialing up an Internet service provider and establishing an Internet connection to the CTI processor (col. 6 lines 49-58, col. 8 lines 31-39, col. 9-10 lines 63-4, and col. 10 lines 33-65).
- 6. In regards to claims 5, 6, 12, 13, 17, and 18, Sonesh discloses the method, wherein the data forwarded is displayed as a screen pop on a video display connected to the computer platform at the remote agent station (col. 6 lines 34-55 and col. 7 lines 24-32).
- 7. In regards to claims 7, 14, and 19, Sonesh discloses the method, wherein first control routines executing at the CTI processor and second control routines executing at the computer platform at the remote agent station are adapted to cooperate over the

Application/Control Number: 09/387,616 Page 4

Art Unit: 2642

data link to provide call center services to the agent at the remote agent station (col. 6 lines 49-58 and col. 10 lines 5-32).

8. In regards to claim 21, Sonesh discloses the system, wherein the data connection is established prior to a first call being switched to the remote agent station, and is maintained open thereafter as further calls are switched to the remote agent station (col. 10 lines 5-9).

Response to Arguments

9. Applicant's arguments filed 04/05/04 have been fully considered but they are not persuasive. Applicant argues that Sonesh, does not teach "retrieving data associated with the selected incoming call from a database at the call center" nor "forwarding the data associated with the selected incoming call to the computer platform at the remote agent station via the data link." Examiner respectfully disagrees with this argument. Sonesh, does teach "retrieving data associated with the selected incoming call from a database (database server 130) at the call center (call centers 501 and 502) (Fig. 1, col. 6 lines 49-55, and col. 7 lines 17-21)" and "forwarding the data associated with the selected incoming call to the computer platform at the remote agent station (remote agents 503) via the data link (Fig. 5 and col. 10 lines 5-32)." Applicant states that data associated with the incoming call routed to the remote station is not automatically forwarded to the remote station according to the teachings of Sonesh. Examiner respectfully disagrees with this argument. Sonesh does teach automatically forwarding to the remote station, data associated with the incoming call routed to the remote station.

Art Unit: 2642

(col. 10 lines 5-32). Therefore, information required by the remote station, is retrieved by the remote station prior to the call being forwarded to the remote station.

Page 5

Conclusion

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Neyman (US 6,215,783) teaches a private IP telephony backbone linking widely-distributed enterprise sites.
- 11. This is a RCA of applicant's earlier Application No. 09/387,616. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 12. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2642

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thiuan P Knowlin whose telephone number is (703)

308-1727. The examiner can normally be reached on Mon-Fri 8:00-4:30pm.

14. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ahmad Matar can be reached on (703)305-4731. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

15. Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
